                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence encodes murine platelet-derived growth factor C (PDGF-C) (formally designated VBGF-F). PDGF-C polypeptides have the ability to stimulate and enhance proliferation or differentiation, and/or growth or motility of cells expressing a PDGF-C receptor.

CC and/or growth or motility of cells expressing a PDGF-C receptor.

CC proliferation, preferably in combination with one other growth factor or haramequaticals comprising PDGF-C polypeptides can also be used for stimulating commetive tissue or wound healing. The CC prolipeptide can be enzymatically processed to generate the active truncated form of PDGF-C and used to regulate the receptor-binding specificity of PDGF-C. PDGF-C can also be used to promote fibroblast mitogenesis in a mammal and to induce PDGF alpha receptor activation.

CC pDGF-C antagonists can be used to inhibit tumnours engine through a tumour control or control or structum and the polyperic polyperic can be used to inhibit tissue control of conditions, and erythroleusemia, can be identified by testing for expression of remodelling during invasion of tumour cells into a normal population of cells. Antagonists can also be used to inhibit tissue

CC calls, Antagonists can also be used to inhibit tissue

The invention relates to the human growth factor homologue zvegf4

(AAB48653), and nucleic acids encoding it (AAC81555). Zvegf4 is a member

(AAB48653), and nucleic acids encoding it (AAC81555). Zvegf4 is a member

of the PDGF (platelet-derived growth factor)/YGBF (vascular endothelial

growth factor) family. Zvegf4 has a growth factor domain (AAB48654)

characterised by a PDGF cystine knot structure, and a CUB domain

(AAB48655) which has a beta barrel structure. Zvegf4 has PDGF-like

activity, having mitogenic activity on fibroblasts, vascular smooth

muscle cells and pericytes, and has also been shown to stimulate bone

cyprowth. The invention also relates to fusion proteins comprising human

zvegf4 or fragments thereof, particularly human zvegf4/human zvegf4

cyprosphi to human zvegf4 or a fragment thereof; a method of a city which binds to human zvegf4 or a fragment thereof; a method of a city which binds to human zvegf4 or a fragment thereof; a method of a city at no comprising exposing bone cells to method ism of bone cells, comprising exposing bone cells to comprising exposing bone cells

cypf4-derived polypoptides; and a method of detecting a genetic

cypf4-derived polypopt used to enhance expansion and mobilisation of haematopoietic stem cells and endothelial precursor stem cells, which may be useful in the treatment of ischaemia, in wound healing, and in the modulation of the immune system. The present sequence represents DNA encoding mouse factor homologs and the nucleic acids that encode them, useful or treating liver damage, ischemia, multiple sclerosis and

zvegf3

factor homologue. Polypeptides comprising an epitope-bearing portion human or murine ZVEGF3 are claimed. The growth factors comprise a growth factor domain and a CTB domain (generic sequence motifs are shown in AAY96869) and AAY96860). The growth factor domain is characterized by an arrangement of Gysteine residues and beta-strands that is characteristic of the "cysteine knot" structure of the platelet-derived growth factor (PDGF) family. The CUB domains shows homology to CUB domains in neuropilins, human bone morphogenetic protein. In portine seminal plasma protein, bovine acidic seminal fluid protein and Xenopus laevis protein. Structural analysis and homology predict that close proteins. The human zvegf3 gene has been mapped to chromosome 4Q28.3 crostins. The human zvegf3 gene has been mapped to chromosome 4Q28.3 croteins. The human zvegf3 gene has been mapped to chromosome 4Q28.3 croteins. The human zvegf3 gene has been mapped to chromosome 4Q28.3 croteins. The human zvegf3 gene has been mapped to chromosome 4Q28.3 croteins are useful for stimulating the growth of fibroblasts or smooth cuseful for regulating cell surface PDGF-alpha receptor and for inhibiting PDGF-alpha receptor mediated cellular processes. ZvegF3 antegonists are useful for treating cancer, rheumatoid architis, dischemia, vascular intimal hyperplasia, disease, mycocardial ischemia, vascular intimal hyperplasia, disease and haemangioma for formation. ZVEGF3 can also be used to modulate neurite growth and for elementative and for treating neurodegenerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1034
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1094

oŧ Use of zvegf3 antagonist for reducing fibroproliferative disorder kidney, liver and bone, reducing extracellular matrix production, treating fibrosis or reducing stellate cell activation in mammal

Example 2; Page 58-61; 70pp; English

The patent discloses materials and methods for reducing cell
proliferation or extracellular matrix production, treating fibrosis and
ceducing stellate cell activation in a mammal. The method comprises
administering a composition containing a Zvegf3 antagonist in combination
with a delivery vehicle. The Zvegf3 is a protein that is structurally
celated to platelet-derived growth factor (PpGP) and the vascular
endothelial growth factors (VEGP). The Zvegf3 protein is also designated
as "VEGF-R" and "PDGF-C". The Zvegf3 antagonist is useful to block the
mitogenic effects of zvegf3 and thereby to inhibit or prevent and treat
keloids, scleroderma, fibrotic disorders of liver such as chronic active
centry fulminant viral hepatitis, post necrotic cirrhosis and
alpha-1-antitrypsin deficiency, fibrotic disorders of the kidney such as
alpha-1-antitrypsin deficiency, fibrotic disorders of the kidney such as
diabetic glomerulosclerosis, focal glomerulosclerosis, diabetic
centry amyloidosis and renal atteriosclerosis, fibrotic disorders
of the lung such as silicosis, asbestosis, idiopathic pulmonary hypertension,
fibrotic disorders of pancreas, fibroproliferative disorders of the
changed and as transplant vasculopathy and fibroproliferative
disorders of the bone such as osteopetrosis and hyperostosis. The present sequence is mouse Zvegf3 DNA

useful for treating skin wounds, reproductive tract disorders, Novel polypeptide, designated zvegf3 useful for ulcers, burns, skin grafting, female reproducti Parkinson's disease, and Alzheimer's disease –

Example 4; Column 97-104; 68pp; English

The invention relates to an isolated polypeptide, designated zvegf3

(a vascular endothelial growth factor-like protein) of 111-136 amino acid

(a vascular endothelial growth factor-like protein) of 111-136 amino acid

(a vascular endothelial growth factor-like protein) of 111-136 amino acid

(comprising a first polypeptide disulphide bonded to a second

protein comprising a first polypeptide disulphide bonded to a second

polypeptide, where each of the first and second polypeptides is from

condition, metabolism or migration, the zvegf 3 encoding

condition, metabolism or migration, the zvegf 3 encoding

colymucleotides and zvegf 3 expression vectors and host cells.

The proteins used were preferably a dimeric protein of residues 225-345 of human zvegf3 or all of the mouse zvegf3 protein, with a delivery vehicle. The method of th invention is useful for promoting growth of bone, ligament or cartilage in a mammal, where the composition is administered at a site of a bony defect, preferably a fracture, bone graft site, implant site, or periodontal pocket, and for stimulating proliferation of osteoblasts or chondrocytes in a mammal. It is further useful for promoting proliferation of osteoblasts osteoclasts, chondrocytes or bone marrow stem cells, where the bone marrow stem cells are harvested from a parient prior to culture. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Promoting growth of bone, ligament or cartilage in a mammal, involves administering to the mammal a protein which comprises growth factor domain of zvegf3 protein, a homolog of platelet-derived growth factor
